RE: Remedial Investigation Report Addendum 2
Site 38 (Operable Unit 11) NAS Pensacola

Dear Mr. Hill:

I have completed the technical review of the above referenced document dated November 14, 2001 (received November 26, 2001). The document is adequate for its intent and is considered final. This approval is made with the understanding that the following work will be completed:

1. Two additional figures illustrating the vertical and horizontal delineation of the contaminants of concern listed on Figure 4-1 should be submitted. The figure illustrating the vertical delineation of the contaminants should also have the lithology of the site included. Each contaminant should have a color designated to the contour lines for both figures.
2. The additional downgradient wells will be installed per previous comments from FDEP. Placement and depth of the wells should be agreed upon prior to the wells being installed downgradient from the site.

Mr. Bill Hill
